

# Blanket Statement.

**Easy-to-sew Alpha FCF fluorocarbon-coated fabrics help you make insulation blankets more profitably.**

That's because they're easier to work with than other, "boardy" materials. You'll notice the difference in the way Alpha FCF feels — soft and workable. And you'll like the easier sewing or stapling — along with the greater productivity — it allows.

Next time you handle Alpha FCF, run a thumbnail across the material. It won't scratch or craze. That's because Alpha uses more high-quality fluorocarbons in the coating.

In addition to making Alpha FCF a more workable fabric, the PTFE-rich coating also makes it more chemically resistant and cleanable. Which gives your customers a lot to like about Alpha FCF too.

**When it comes to removable insulation blankets, Alpha FCF should cover it.**

For more information about Alpha FCF and our complete line of insulation fabrics, facings, composites and supplies, call 800-631-5399.
